

**Amendments to the Claims:**

*This listing of claims will replace all prior versions, and listings, of claims in the application:*

Kindly cancel claims 1 - 4 without prejudice, in favor of new claims 5 - 12.

Claims 1 - 4. (Cancelled)

5. (NEW) A process for the continuous preparation of aqueous emulsions comprising organosilicon compound(s) (A), emulsifier(s) (B) and water (C), comprising

a) feeding at least a portion of the (A), (B), and (C) components continuously to a first high-shear mixer in which a highly viscous silicone emulsion is formed;

b) feeding the highly viscous silicone emulsion from a) to a second high-shear mixer, and optionally admixing further components (A), (B), and (C);

c) establishing a set point for each of temperature and pressure for emulsion exiting the first high shear mixture and the second shear mixer, measuring the temperatures and pressure of the emulsion exiting the first high shear mixer and the second high speed mixer, and adjusting process parameters to maintain the temperature and pressures of the emulsion exiting the first and second high speed mixers at their respective set points.

6. (NEW) The process of claim 5, wherein the pressure measured after said first or after said second high shear mixer is adjusted by regulating the pressure after the second high-shear mixer.

7. (NEW) The process of claim 5, wherein the pressure measured after a high speed mixer is adjusted by regulating the speed of the high speed mixer.

8. (NEW) The process of claim 6, wherein the pressure measured after a high speed mixer is adjusted by regulating the speed of the high speed mixer.

9. (NEW) The process of claim 5, the temperature is regulated by adjusting the temperature of the raw materials and the speed of the mixers.

10. (NEW) The process of claim 6, the temperature is regulated by adjusting the temperature of the raw materials and the speed of the mixers.

11. (NEW) The process of claim 7, the temperature is regulated by adjusting the temperature of the raw materials and the speed of the mixers.

12. (NEW) The process of claim 5, wherein the organosilicon compound (A) is liquid at 25°C and has a viscosity of from 0.5 to 500,000 mPa·s.
